

V25

ADVANCED FUEL TREATMENT

STAND OUT FOR THE RIGHT REASONS

Aderco is a B Corp
certified company
www.aderco.com

Your yacht is maintained to exceptional standards.

Your fuel should be too.

Superyachts demand the highest standards of reliability, cleanliness and performance. Whether cruising between destinations or spending extended periods in marina berths, fuel quality plays a critical role in protecting engines, generators and onboard equipment.

V25 is an advanced fuel treatment designed to improve fuel quality before, during and after combustion, helping captains, engineers and owners reduce fuel-related issues while maintaining optimum engine performance.

Unlike many conventional additives, V25 combines combustion improvement with lubricity enhancement in one highly concentrated, non-hazardous treatment.

ONE TREATMENT THROUGHOUT THE YACHT

MAIN PROPULSION ENGINES

TENDER & CHASE BOATS

ON BOARD GENERATORS

JET SKIS & PERSONAL WATERCRAFT

From the engine room to the swim platform, V25 provides a single fuel treatment solution for equipment throughout the vessel. Rather than using different products for different applications, one treatment helps maintain fuel quality, support cleaner combustion and protect critical fuel systems across the entire yacht.

Developed from more than 40 years of experience in fuel treatment for the demanding marine industry, V25 is specially formulated for fuel users across a wide range of diesel and gasoline-powered engines.

V25 helps combat common fuel issues associated with long-term storage, including oxidation, contamination and water build-up, while also enhancing combustion performance. The result is cleaner, more efficient engine operation with reduced harmful emissions and particulate matter.

PREVENTS DIESEL BUG

Helps control microbial contamination in fuel, reducing the risk of sludge, filter blockages and fuel-system issues caused by diesel bug.

IMPROVES LUBRICITY

Restores and enhances fuel lubricity, helping to reduce friction and wear within critical fuel-injection components for smoother, more reliable engine performance.

WATER CONTROL

Helps manage water contamination within the fuel system, supporting cleaner fuel and reducing the risk of fuel-related issues.

IMPROVES FUEL STABILITY

Helps maintain fuel quality during storage, reducing fuel degradation and the formation of deposits and sludge.

ENHANCES PERFORMANCE

Supports cleaner, more efficient combustion to help maintain smooth, reliable engine performance and reduce visible exhaust smoke.

ONE SMALL ADDITION. A BIG DIFFERENCE.
1 Litre Treats up to 10,000 Litres of Fuel

OWNERS

Longer Cruising Confidence

Supports more efficient combustion to help maximise the performance and range from every tank, giving greater confidence on longer passages.

Cleaner Yacht

Helps reduce smoke and soot, keeping transoms, swim platforms, decks, toys and exterior furnishings cleaner for guests and crew.

Protection During Lay-Up

Helps maintain fuel quality during seasonal storage by reducing the effects of oxidation, water contamination and microbial growth.

Protect Your Investment

Helps reduce the risk of fuel-related issues that can affect reliability, increase maintenance costs and interrupt cruising plans.

ENGINEERS

Restores Fuel Lubricity

Helps restore lubricating properties lost in modern low-sulphur diesel, protecting injectors, fuel pumps and other precision fuel system components.

Cleaner Fuel Systems

Helps reduce sludge, deposits and contamination throughout the fuel system, supporting improved reliability and reduced maintenance.

Simple to Use

Highly concentrated, non-hazardous and easy to dose. Just 1 litre treats up to 10,000 litres of fuel with no specialist dosing equipment required.

Proven Technology

Built on Aderco's proven commercial marine technology, combining combustion improvement and lubricity enhancement in one advanced fuel treatment.

CAPTAINS

Reliable Operation

Helps maintain cleaner fuel systems and supports consistent engine performance throughout the season.

Cleaner Engine Start-Up

Supports cleaner combustion after periods alongside or at anchor, helping reduce visible exhaust smoke during engine start-up.

One Treatment

Suitable for main engines, onboard generators, tenders, chase boats, Jet Skis and other diesel-powered auxiliary equipment.

Easy Onboard Storage

Its non-hazardous formulation is easy to store onboard and requires no special handling or transport precautions.
